

Tunstall Selects Medixine Technology to Power Its Global Remote Care Services

New digital health solution, built on Medixine Suite, launched by Tunstall with international expansion underway.

Espoo, Finland – Medixine is pleased to announce that Tunstall Healthcare, a global leader in connected care and health monitoring, has selected the Medixine Suite platform to serve as the foundation for its next-generation remote care services. The new Tunstall solution, developed in partnership with Medixine, went live this summer and is now expanding to all Tunstall countries.

The collaboration brings together Tunstall’s long-standing expertise in telecare and digital health with Medixine’s proven cloud-based technology platform. By integrating Medixine Suite into its global operations, Tunstall gains a flexible, scalable, and secure framework to deliver continuous digital care across multiple regions and clinical contexts.

“This partnership represents a significant step forward in our mission to connect people, technology, and care in ways that truly improve lives,” said David Jack, CTO, Tunstall Healthcare Group. “With Medixine’s platform, we can unify our digital health services and offer a consistent, high-quality experience to patients and care providers across our markets.”

The new Tunstall service enables healthcare organizations to seamlessly connect patients with clinical teams, manage care pathways remotely, and analyze health data in real time. Built on Medixine Suite, it supports integration with various medical devices, secure communication between patients and professionals, and automated workflows that enhance clinical efficiency and care outcomes.

Global Expansion

Following the successful launch, Tunstall is extending the deployment of the Medixine-based solution across Europe and other global markets. New countries are being added in phases, reflecting strong demand for scalable, interoperable digital health infrastructure. As the rollout continues, millions of patients will benefit from connected care solutions designed to support independence, early intervention, and better health outcomes.

“We are proud that Tunstall has chosen Medixine as a key technology partner for its international digital health strategy,” said Tapio Jokinen, Founder of Medixine. “Our shared vision is to make connected care simple, reliable, and accessible to everyone — and this launch is an exciting milestone toward that goal.”

About Medixine

Medixine provides advanced digital health solutions that enable organizations to deliver proactive, patient-centered care. The Medixine Suite platform powers remote care, virtual

communication, and clinical data management for leading healthcare providers and technology partners worldwide.
